Passage

The theory of relativity, developed by Albert Einstein in the early 20th century, revolutionized our understanding of space, time, and gravity. Einstein's groundbreaking insights challenged Newtonian physics and _____ a new framework for interpreting the cosmos. According to the theory of relativity, the fabric of spacetime is not fixed but can be warped by the presence of mass and energy. This revolutionary concept has led to predictions of phenomena such as black holes, gravitational waves, and time dilation. Einstein's theories have been confirmed through rigorous experimentation and observation, cementing his status as one of the greatest scientific minds in history.

Question

Which choice completes the text so that it conforms to the conventions of Standard English?

Passage

In the field of astronomy, the discovery of exoplanets—planets orbiting stars outside our solar system—_____ expanded our understanding of the universe. The detection of these distant worlds has enabled scientists to speculate about the potential for extraterrestrial life. With advancements in technology and observational techniques, astronomers have identified thousands of exoplanets in the Milky Way galaxy alone. These discoveries have raised profound questions about the prevalence of life in the cosmos and the possibility of habitable environments beyond Earth. As research in exoplanetology continues to evolve, scientists are hopeful that future discoveries will provide insights into the diversity of planetary systems and the conditions necessary for life to thrive.
